

Certification of Personal Protective Equipment

– A cooperation between SP Technical Research Institute of Sweden and Swerea IVF

SP Technical Research Institute of Sweden

Following requests from the PPE industry, we can now offer a new flexible solution for our customers who wish to test and certify products with textile content according to the PPE Directive.

SP Technical Research Institute of Sweden is a Notified Body that has the authority to certify Personal Protective Equipment, PPE. Swerea IVF is one of Europe's most comprehensive accredited textile laboratories with equipment for determining a majority of the properties that must be met to obtain an approval for a CE marking. After the established contact, we strive to perform the testing and certification work in parallel.

Of course it is possible to certify at SP with test reports from any accredited laboratory or to test at Swerea IVF for certification at any Notified Body.

The standards our cooperation mainly concerns are as follows:

- SS-EN 471:2004+A1:2007, High-visibility warning clothing for professional use
- SS-EN ISO 11611:2007, Protective clothing for use in welding and allied processes
- SS-EN ISO 11612:2008, Protective clothing – Clothing to protect against heat and flame (former SS-EN 531)
- SS-EN ISO 14116:2008, Protective clothing Protection against heat and flame Limited flame spread materials, material assemblies and clothing (former SS-EN 533)
- SS-EN 469:2005, Protective clothing for firefighters – Performance requirements for protective clothing for firefighting
- SS-EN 12477, Protective gloves for welders

If you have a product that is not included in the above standards do not hesitate to contact us. Perhaps we already have plans to include that product in our catalog.
