Traditional Grains Review

The Traditional Grains Review presents the latest research and development in traditional grains from Africa and South America. The results have been presented in a series of workshops gathering leading scientists in the area.

**Short overviews**

Nutritional aspects of traditional grains
Ulf Svanberg

End use functionality of cereal components
Peter Belton

Phytochemical profile and nutraceutical properties of different types of sorghums
Sergio O. Serna-Saldivar

Food and non-food utilization of cereals components
Mats Stading, Anna Oom and John R.N. Taylor

Non-gluten bread products in the North market
Mats Stahlberg

Complementary food based on traditional grains for young children in Africa
John Van Camp, P. Mamiro, S. Mbithi, M. Kimanya, B. De Meulenaer & P. Kolsteren

Production of good quality sorghum or millet malts for semi-industrial foods production in West Africa

Scientific research for industrialisation of sorghum in Africa
Lewis Iheanacho Ezeogu

The role of fermentation and sprouting in the reduction of protease inhibitors in raw soyabean
Petronella T. Banda, F. Rumosa-Gwaze, I. D. T. Mpofo and S. M. Makuza

Improvement in the cooking and physico-chemical characteristics of hard-to-cook cowpeas by pre conditioning and mikronization
Brasilino BV Salvador, Louis A.M. Pelembe and Amanda Minnaar

Grain and its crop residue utilisation
Y.B Byaruhanga and J.C Auko

Correlations among bioactive compounds in sorghum grains and their impact on agronomic and food qualities
Mamoudou H. Dicko

Effect of enzymic hydrolysis on antioxidant activity and potential health benefits of traditional african sorghum-based foods
N.R Dlamini, L.W Rooney and J.R.N Taylor

Chemical composition and antioxidant effects of extracts from sorghum flour and bran
K.G Doudu and P.S. Belton

Properties of heat processed sorghum kafirin and maize zein
M.N Emmambux and J.R.N Taylor

Optimization and end use characteristics of extruded millet fortified with soybean for the manufacture of FURA: A nigerian traditional food
K.B. Filli, I. Nkama, U. Abubakar and V. Jideani

Non-food use of cereal by-products
T. Gillgren and M. Stading

Ageing of kaferin dough related to specific protein fractions
D. Johansson and M. Stading

Why gamma irradiation modifies cowpea protein-related functional properties
J.O. Abu, K.G. Doudu and A. Minnaar
Effects of processing parameters on the iron and zinc solubility of infant sorghum porridge

Popped amaranth grain and its products: breakfast cereal and crunchy bars: popping process, nutritive value and shelf life

Utilisation of flour milled from micronised (130°C) cowpeas in maize based traditional Malawian snacks

Sorghum: An environmentally-friendly food and industrial grain in Nigeria

Use of Lactobacillus Plantarum A6, an amylolytic lactic acid bacterium, for partial starch hydrolysis in a pearl millet-groundnut slurry

Effect of selected essential oils on physicochemical changes of stored cowpea, Vigna Unguiculata, treated to control cowpea bruchid, callosobruchus maculatus (F.)

Identifying farmers' preferences for improved sorghum varieties in Limpopo, South Africa

Improvement of grain legume production in dryland farming systems of Kenya through biological nitrogen fixation: experience with tepary beans (Phaseolus acutifolius A. Gray var. Latifolius)

Phenolic content, antioxidant activity and sensory acceptability of wheat-finger millet composite cookies

Development non-oilseed legumes as source of protein to strengthen food security in marginal areas

N. Lara, A. Mejia and A. Cangás

P. Katungwe, A. Mulwafu, A. M. Mwangwela

A. C. Ogbonna

Gayan R. S. Rubasinghege, Krishanthi Abeywickrama and Priyani Paranagama

N. G. Shargie and W. Wenzel

C. A. Shisanya

M. Siwela, J. R. N. Taylor, and K. G. Doudu

A. Subagio, W. S. Windrati, Y. Witono and A. Nafi
